

Manitex adds new options to the 1770C & 1970C

Manitex recently introduced an out and down outrigger option for the CM170 and the CM190 series machines at the Railway Interchange Show in Minneapolis.

With a maximum lift capacity of 19-tons and installed on a commercially available chassis equipped with Hi-rail gear the new offering is ideally suited for various rail-road construction and maintenance applications.

The unveiling was well received by both Class one railroads and contractors alike because of the flexibility in the 3-position outrigger spread.

For more information about this product please contact Manitex at www.manitex.com or your Manitex representative.

Manitex, Inc., based in Georgetown, TX a division of Manitex International is a leading provider of engineered lift solutions, including boom trucks, truck mounted cranes, articulating cranes, industrial crane and truck mounted aerial work platforms.
